Cleaning your Cabinets

Cleaning your cabinets properly

To clean your new custom cabinets, use these materials and techniques for the best result:

1. First use a Microfiber or soft cloth to remove any dust and or debris from your cabinets.
2. Mix together a small amount of light or mild soap with clean water.
3. Apply a reasonable amount of mixture to a soft cloth and or sponge.
 - a. Do not apply heavy amounts to avoid free standing water on cabinets.
4. Wipe and rub the cabinets doors and drawers with cloth.
 - a. More effort may be required on grease and grime build up areas.
5. Once completed, wipe cabinets with dry soft cloth to ensure no water is settling or resting in seams or surfaces.

Cleaning Don'ts

Other products may be used on your cabinets, however keep in mind the following:

1. Do not use any harsh cleaning chemicals on cabinets.
 - a. This may overtime discolor or remove layers of the finish.
2. Do not use any oil based cleaning products.
 - a. Oil based products will leave a layer of residue in the wood and or material. This residue prohibits the possibility of any future refinishing and or touch ups.
3. Do not use any abrasive sponges and or cloths while cleaning.
